Observation: HR Dashboard

- The sex ratio in the company is quite balanced, with females occupying 55% of the positions and males filling the remaining 45%.
- As far as employee contracts go, there is roughly an even split between full-time, part-time, and contractual employees, with each receiving nearly a third of the share.
- Marital status is another metric where the share is almost equally divided into four categories - single, married, divorced, and widowed.
- The company has a high average age, with over 37% of the employees occupying the 60+ category. The remaining staff (~63%) have an almost equal split between the other four categories: 20-30, 30-40, 40-50, and 50-60.
- The new hires also follow a similar trend, with over 44% aged 60 or higher.
- The most populous department is Production, which is home to close to 70% of employees. IT/IS and Sales also house a lot of employees, although nowhere near as many as Production

Observation : Training Analysis

- The company has spent close to \$11 million on employee training till date.
- There are 13 unique training programs, with the estimated cost of training an employee amounting to \$5.49K.
- The training programs could be either internal or external, with a company opting for a 50-50 split between the two.

Observation : Termination Analysis

- The termination ratio is almost identical to the sex ratio, with just over 55% of employees leaving the company identifying as females.
- Similarly, given the age distribution, it is not surprising to note that the majority of the employees leaving belong to the 60+ category.
- There is a very even split between four categories when it comes to reasons for employee termination, namely 'Involuntary', 'Voluntary', 'Resignation', and 'Retirement'.
- Another thing to note about those terminating their contracts is that typically they have been engaged with the company for at least a year.

Observation : Performance Analysis

- Most employees perform to a standard that is at least fair, with nearly 74% of them receiving a rating of '3 or Above' (out of a possible maximum of 5).
- There are no other metrics that stand out in this department. That is, it cannot be said that employees of a certain age, race, or gender perform better than others

Observation : Recruitment Analysis

- There are many methods employed by the company to hire new talent, such as using Naukri, going through an agency, using LinkedIn etc. and they are all equally popular.
- Hiring is not a task reserved for specific months of the year, it is an all-year-round exercise as is shown by the data.
- Hiring is also fairly competitive, with just over 20% of potential hires making the final cut.
